

MP3 Digital On-Hold Audio System

for use with PBX & Key phone systems

On-Hold Plus™ 6000

Features

- **USB connection** - Connect to your PC via USB to add new content or update firmware.
- **PC connection...strictly optional** - Unit uses PC only to update content stored in flash memory. Updated content can optionally be added by copying an MP3 or WMA audio file to a Smart Media Card without the unit ever being connected to a PC or network.
- **MessageStudio software** - Allows users to create new on-hold audio content with voice and music on their PC with a few mouse clicks. Then, just transfer the file directly to the unit's on-board memory, to a Smart Media Card, or upload to a server for a network update.
- **Auto start after power loss** - Retains stored preferences such as: music selection, repeat mode and volume settings. If power to the unit is lost, unit immediately returns to continuous playback with all settings without human intervention.
- **LCD Control Panel** - 6 line backlit LCD panel displays ID-3 tags with descriptive names of tracks for easy identification and selection. Display also shows a variety of important information so user can choose playback preferences and easily determine unit's operational status.
- **Flash memory** - 16MB of on-board flash memory stores over 57 minutes (sampled at 32kbps) of awesome sounding content. Additional Smart Media Cards (not included) can add over 9 hours of content for continuous playback.
- **Ready to go right out of the box** - Pre-loaded with several files containing great sounding music mixed with intermittent "thanks for holding..." messages. Just plug it in and walk away. Anything else is completely optional.
- **Free personalization** - A free professionally voiced, personalized on-hold production is provided to the customer automatically when a product is registered.

Specifications
